## WELCOME NOTES

International Congress Oil and Protein Crops Section Conference of EUCARPIA which is organized by Trakya University and the International Researchers Association in cooperation with the European Association for Research on Plant Breeding (EUCARPIA). The congress is held in Megasaray Westbeach Hotel, Antalya, Turkey, on November 2-4, 2023 with supporting of several national and international partners.

The Congress topics covers Oil and Protein Crops: Plant Breeding and Genetics, Molecular Genetics and Biotechnology, Biology and Physiology, Genetic Resources, Plant Protection, Agronomy, Economy, Animal feeding, Food Science and Nutrients, Fats, lipids, and Protein studies.

Oil crops are rich sources of oils, proteins, minerals, vitamins, and dietary fibers for both human and animal feeding and provide the raw material for the production of biodiesel. Oil crops are soybean, cottonseed, sunflower, canola, rapeseed, peanut, safflower, flax, sesame, coconut, castor, copra, etc.

Almost 50% of the global food protein supply comes from cereal seeds. Soybean, peanut, common bean, pea, lupine, chickpea, faba bean, lentil, grass pea, cowpea, pigeon pea, etc. are currently the most important legumes for human consumption and animal feed. Because of the protein content of their seeds; grain legumes, cereals, and other minor crops such as amaranth, quinoa, hemp, caraway, etc. are protein crops growing for plant protein for food and feed.

The Congress is intended that the subjects to be kept broad in order to provide opportunity to the science and research community to present their works as oral or poster presentations. The Congress languages is in English. Researchers, breeders and others with an interest in the genetics and breeding of oil and protein crops are invited to participate. Among the topics to be discussed are directions of breeding for resistance to abiotic and biotic stresses, improved industrial use, and conventional versus organic production.

As there have been many different scientific meetings around the world, we aimed to bring three different communities together, namely science, research and private investment groups considering practical information sharing that is of value for breeders, seed enterprises, researchers and scientists, in a friendly environment of Antalya, Turkey to share their knowledge and experience and benefit from each other.

There are 38 orals and 63 poster presentation in the congress both joining and presenting normal and online with 141 participants from 20 different countries from the world.

The congress gathered scientists from around the world, and present their recent achievements. The organizers will also invite relevant stakeholders to provide a view on the current situation around the world as well as prospects to overcome the limitation for sustainable crop production to feed the world.

We would like to thank all of you for joining this conference and we would like to give also special thanks to our sponsors and collaborators for giving us a big support to organize this event.

Prof Dr Yalcin KAYA  
Head of the Organizing Committee

## ORGANIZING COMMITTEE

<u>NAME</u>	<u>INSTITUTION</u>	<u>DUTY</u>
Prof Dr Yalçın KAYA	Trakya University	Head of Committee
Assoc Prof Dr Necmi BEŞER	Trakya University	Vice Chair
Dr Leonardo VELASCO	Institute for Sustainable Agriculture CSIC, Spain	Section Chair
Emrah AKPINAR	Trakya Univesity	Congress Secretary
Prof Dr Bulent UZUN	Akdeniz University	Member
Prof Dr Mehmet Emin CALISKAN	Nigde OmerHalisdemir University,	Member
Dr Maria PACUREANU-JOITA	Romanian Acad, Res. Studies Center for Agroforest Biodiv	Member
Dr Dragana MLADINOVIC	Novisad Agricultural Research Institute	Member
M. İbrahim YILMAZ	Trakya Agricultural Research Institute	Member
Dr Göksel EVCİ	Trakya Birlik	Member
Dr Veli PEKCAN	Trakya Seed Co,	Member
Cengiz KURT	International Researcher Association (IRSA)	Member

## INVITED SPEAKERS

<b>Dr. Vladimir MIKLIC</b>	<b>Novisad Research Inst. Vice Director, SERBIA</b> <b>«Hybrid Sunflower Production»</b>
<b>Dr Cengiz TOKER</b>	<b>Vice-Rector, Akdeniz University, TURKEY</b> <b>«Legume Breeding &amp; Production»</b>
<b>Dr. Etienne PILORGE</b>	<b>Terres Inovia, FRANCE</b> <b>«Oil &amp; Protein Crops Sector in Europe»</b>

## EDITOR OF THE PROCEEDINGS ABSTRACT BOOK

Prof Dr Yalcin KAYA, Assoc Prof Dr Necmi BESER

## SCIENTIFIC COMMITTEE

### ABSTRACT

The aim of this research was to determine the histological basis of the genotypic differences for drought tolerance, calculate tissue volume densities ( $Vv$ ), examine the variability, and assess tissue proportions along the root maturity gradient. For the stereological analyses of root tissues four sunflower genotypes, 14 days old seedlings which were grown in rhizotrons, have been carried out on the primary (axial) root. The total length of the axial roots varied among genotypes, but not significantly. Root cross-sections were cut along the root maturity in five segments according to the principle of systematic uniform random sampling method. Cross-sections were made applying cryo-technique procedure and proportion of tissues was estimated by point-counting method. The vessel network characteristics (number and diameter of vessels) vary along maturity gradient and individual roots. Consequently, branching vessels pattern and axial conductance may limit water flow through root systems. Characteristics, such as (i) arrangement, number and size of vessels, (ii) volume density of xylem, and (iii) volume density of cortex parenchyma are promising criteria that can help in the selection of more drought tolerant genotypes. Therefore, the root anatomical features have to be included in future breeding strategies to improve the sunflower cultivars for climate changes.

**Acknowledgment:** This work is supported by the Science Fund of the Republic of Serbia, through IDEAS project “Creating climate smart sunflower for future challenges” (SMARTSUN) grant number 7732457

**Key words:** root anatomy, sunflower, stereology
